

Has your child been admitted to hospital with an **asthma attack**?

This hospital is taking part in a national project to help make the care of patients with asthma better.

This project, which started in June 2019, **collects information** about **children and young people admitted to this hospital** with an **asthma attack**. This includes confidential information.

This project is called the **National Respiratory Audit Programme (NRAP)**.

The information will be used to help improve asthma care for children and young people.

For more information about the project or how to opt-out, please ask a member of the hospital team for an information leaflet.
