**1.8 Data quality &  
analysis plan**

The audit is completed by clinical teams using the online webtool.

Crown Informatics complete internal data value and range checks, date/time checks and dataset logic checks on all audits. The webtool validates data at the point of entry by rejecting invalid responses. Data are reviewed by Crown post extract for validity and dataset consistency.

**1.9 Outlier policy**

The outlier policy is currently under development

**2.1 Outcome measures**

Re-fracture rates

Commenced bone therapy by first follow up (16 weeks of fracture)

Adherence to prescribed anti-osteoporosis medication at 12 months post fracture

**2.2 Process measures**

Identification of fractures

Time to FLS assessment

Time to DXA

Referred for falls assessment

Bone therapy recommended

Strength and balance treatment received

Monitoring contact 12-16 weeks post fracture

Treatment by 1st follow up

1 year drug adherence

**2.3 Organisational  
measures**

- Resources - commissioning arrangements and staffing arrangements e.g. how much time is spent working within the FLS as the whole time equivalent
- Scope - population size served; patient groups covered
- Patient identification - methods of identifying different types of patients e.g. hip fracture, non-hip fracture, vertebral fracture
- Assessment / identification - testing for secondary causes of osteoporosis, DXA scans
- Initiation for secondary fracture prevention - who is responsible, types of interventions offered, medication offered
- Falls intervention - falls assessment provision, exercise assessments
- Report distribution - where does the FLS report go, what does it include
- Long-term management of patients - who is responsible for monitoring of patients in FLS, adherence and re-evaluation

- Patient experience - survey to seek patient views, use of FFFAP and ROS patient resources
- Governance - how often, minutes, patient involvement
