Completion

Most audit questions were answered for >99% of the patient cases, a slight improvement on completion rates in 2022. An exception was whether the patient had a medication review during admission, which had 96% completion. The questions requiring a record of timings and entry of clinical measurements consistently had lower completion.

Table 1.

Dataset question	Completion
Time from multifactorial assessment to fall recorded	81%
Blood Pressure time documented	30%
4AT time documented	22%
Time to check for injury recorded	68%
Time to analgesia recorded	75%
Time to Xray recorded	98%
